Our commitments

Determine our objectives per employee

We have established a threshold of 3 eqTCO2 per year per FTE by 2025. This represents a 4% reduction each year.

Improving our assessment method

This objective aims to improve the accuracy of our carbon footprint calculations from year to year. We will integrate as many quantifiable parameters as possible, such as the rebound effect of home office.

Offer a "Climate" training

We wish to set up a climate training to raise awareness and exchange with each employee in order to give them the opportunity to be an actor.

Our actions

Internally

Our premises

Favouring green energy
Less energy consuming premises
Dialogue with the landlord

IT equipment & furniture

Responsible purchasing policy
Digital eco-gestures
Inventory of the stock

Transports

Define a travel policy
Favour soft mobility:
Carpooling and train

Within our startup ecosystem

Support

Assessing their carbon footprint
and defining their
climate strategy

Highlight

Promoting climate actions
from startups of all the startups to
give impulse to others
